

RESILMOUNT

A96R™ CEILING ISOLATION CLIP

MECHANICALLY ISOLATE CEILINGS AND WALLS

ISOLATE AIRBORNE SOUND FROM STUDS

SOUND CELLS ABSORB SOUND

FITS STANDARD FURRING CHANNEL

Resilmount A96R is an adjustable acoustic mounting bracket for suspending furring channels below joists or trusses. A96Rs have been proven to reduce airborne and structure-borne vibration in ceiling applications.

A96R clips are an appropriate solution when a ceiling needs to be dropped below suspended pipes, ducts, or electrical conduit, while still maintaining excellent noise proofing characteristics.

INSTALLATION PATTERN FOR A96R CLIPS

Sound Isolation

Resilmount A96R sound isolation clips prevent sound from travelling through ceilings. By physically separating the ceilings from joists, Resilmount A96R clips stop sound from moving between floors.

Customizable Installations

Resilmount A96R clips reduce the amount of vertical space lost from adding clips and channel soundproofing solutions to ceilings. Their intuitive design allows for the ability to adjust the distance from which the ceiling hangs from the joists.

Engineered Effectiveness

Resilmount clips utilize a patented thermoplastic rubber pad that is more effective than normal rubber. Sound cell design breaks up and absorbs sound.

RESILMOUNT A96R CLIPS

Resilmount A96R sound isolation clips work to mechanically “decouple” ceilings from a building's frame, reducing the amount of sound energy travelling from one floor to another. Additionally, the rubber mount of the A96R clips absorbs sound, reducing noise transmission.

Example A.

A96R clips are adjustable and are ideal for ceiling soundproofing installations where the joists are uneven. Since A96R clips hang from the ceiling they can be used when the ceiling needs to hang below pipes or conduits.

Example B.

A96R clips are also the ideal solution when there is a desire to keep the ceiling as high as possible while still separating it from the structure of the building. Ceiling drops as low as 1/4" are achievable with Resilmount A96R clips.

Resilmount A96R clips are a versatile solution, along with furring channel, for a variety of ceiling soundproofing applications. If your ceiling must be detached from the joists, and a standard solution won't work, Resilmount A96R clips are a likely solution.

SOUND ISOLATION YOUR WAY

Resilmount A96R sound isolation clips provide a variety of ways to isolate ceiling drywall from overhead joists. A96R clips are adjustable and easy to install.

In most cases, measuring and screwing in clips, followed by snapping in hat channel should be an simple and straightforward process.

When combining a Resilmount clips and channel assembly with the application of Green Glue Noiseproofing Compound and extra layers of drywall, you create a total noise solution that effectively reduces high, mid, and low frequencies. Acoustical sealant to fill perimeter gaps and gaps around fixtures adds a finishing touch to stop noise propagation.
